

HR Mock Interview

Sep 10, 2026, 07:54 PM ET

Transcript

[07:33 PM ET] **AI Interviewer:** Hi! I'm your AI interviewer for the HR Mock Interview. This is a required interview for your career curriculum, and I'll ask you a set of questions one at a time. Take your time. Are you ready to begin?

[07:33 PM ET] **You:** Yes.

[07:33 PM ET] **AI Interviewer:** Wonderful. Let's get started.

How have your career goals evolved over time?

[07:34 PM ET] **You:** Uh, at first I was looking for a career where I could learn and grow. After using experience, uh, with Q&A, I realized I really enjoyed testing and, um, finding problems. Um, my goal is definitely to become a full, uh, full-time Q&A engineer, uh, while gaining real world experience and, um, that's about it.

[07:34 PM ET] **AI Interviewer:** Thank you. Can you walk me through a specific moment when you realized that testing and finding problems was something you genuinely wanted to pursue long term?

[07:35 PM ET] **You:** I have a pac- a specific moment for me was when I was working on one of my Q&A projects. I had to test on the application, uh, using different test cases, uh, finding an issue, uh, where the actual issue result was, did it match, uh, the expecting result? Um, when I went back through my steps, re-reducing the problem and, uh, documenting the, the bug report. Um, what I was not...What I enjoyed was not finding the bug, but figuring out what caused it and documenting it and finding, uh, the way to, uh, fix the bug problem, um, and solving... and the solving process for it. That's the only thing I can think of.

[07:35 PM ET] **AI Interviewer:** Got it. Let's move on.

If you could design your ideal role, what would it include?

[07:36 PM ET] **You:** My ideal would be let me test software, find and report bugs, uh, work closely with the developers, and, uh, help create a better product for users, and help create... help find solutions. Also wanted... Also want opportunities to keep learning and eventually grow into a automatin' tas- tester at some point.Okay.

[07:36 PM ET] **AI Interviewer:** Thank you. Can you tell me a bit more about what draws you specifically to working closely with developers? Is there a particular experience that shaped that preference?

[07:36 PM ET] **You:** Um, finding Bugaports is par- is, is working for the job, but also, uh, learning how to communicate clearly to, uh, the developers and, uh, te- showing them and how to fix it. I enjoy the teamwork and problem-solving process. That's why I like to cl- closely work with developers and build a relationship with them.

[07:36 PM ET] **AI Interviewer:** Okay, let's move on.

Tell me about a time when effective communication prevented a misunderstanding.

[07:37 PM ET] **You:** Um, do I want my Q&A project to find an issue with the actual res-result that didn't match the expected result? Instead of reporting it that the feature wasn't working, I had to make sure the above report was clearly explained and took step by step for the test data to be used. And what I ex- what I, what, what should have been expected and what actually happened. Um, definitely by communicating those details as clearly as possible, the issue can be understood and someone will be able to, uh, uh, seen that I, I, uh, assumed that I tested it incorrectly, uh, or tested it correctly. Um, the experience taught me that good communication can prevent misunderstandings between Q&A and developers and help the team resolve problems faster.

[07:37 PM ET] **AI Interviewer:** Thank you. What was the outcome in that specific situation? Did the developer understand the issue, and how was it resolved?

[07:38 PM ET] **You:** Since it was a train- training project, I didn't work directly with the developer on the mix, on the fix, but my job was to document the bug clearly enough that the developer could rebu- reproduce it. It taught me how to important clear communication it, it, i- it is in, in a real work environment. I would retest the developer's fix and confirm the issue that was, that could, that we can resolve better.

[07:38 PM ET] **AI Interviewer:** Got it. How do you build relationships with new team members or stakeholders?

[07:39 PM ET] **You:** I build rela- relationships by listening, communicating, getting to know the person better, uh, ask- asking questions, and being reliable. Also trying to understand that everyone's role is, um... We all have different roles, you know, and how can we all... and we should all be working together, um, being consistent and respectful f- for each other, um, and build trust and know that we all respect each other's job.

[07:39 PM ET] **AI Interviewer:** Thank you. Can you walk me through a specific time when you had to build a relationship with someone new, and what you did to make that happen?

[07:39 PM ET] **You:** Um, during my Q&A training, I had to work with people I didn't know well. Uh, I had to build my relationship by asking questions, listening to their faces and their ideas, communicating clearly, and being reliable over ti- over time. We became more comf- comfortable working together, and it also showed how important trust and communication are on the team.

[07:39 PM ET] **AI Interviewer:** Okay. Describe a situation that taught you something important about yourself.

[07:40 PM ET] **You:** ...

[07:40 PM ET] **AI Interviewer:** Take your time. Would you like me to repeat the question?

[07:40 PM ET] **You:** No, no, no. Uh, I was just thinking. Um, working through a difficult Q&A project taught me that I need to be present, persistent. Uh, I didn't always know the answer right away, but, uh, I never gave up. Uh, ask, you know, asking questions, learning from my mistakes, and I kept trying. Uh, it showed me that I can handle challenges as long as I'm willing to keep learning and, and, uh, never give up.

[07:40 PM ET] **AI Interviewer:** Thank you. Can you walk me through that specific project? What was the challenge, and what did you actually do to work through it?

[07:41 PM ET] **You:** Uh, well, I didn't understand something. Uh, I had went back to the requirements, worked through it step by step, uh, and corrected my mistakes instead of giving up. I completed the project, showed me that

I can handle complicated assignments by staying organized and being patient and continuing to learn. Uh, my project that I had trouble on was the urban scooter project. It was challenging because I had to test web, w- test web it, mobile, uh, mobile test, and IPA functions. Instead of trying to do everything all at once, I had to break it into smaller tasks, uh, reviewed the requirements, created test cases, different tests, inputs, and browsers, um, bugs and results, and worked with the A- IP- API for the mobile app. Uh, when I got stuck, definitely had to go back to more of my requirements and work through the problem step by step, and it taught me that I'm c- I can be persistent if I, uh, can, if I can work through the difficult problems without giving up.

[07:41 PM ET] **AI Interviewer:** Got it. Let's move on.

How do you typically seek feedback and use it to improve?

[07:42 PM ET] **You:** I ask for feedback, listening carefully and making sure I understand what I can improve. Then I apply that feedback to my work and try not to repeat the same mistake. Uh, feedback can definitely be a way of learning to become a... not just a, uh, become a better Q&A, but better at other things

[07:42 PM ET] **AI Interviewer:** Thank you. Can you give me a specific example of a time you received feedback and what you did differently as a result?

[07:43 PM ET] **You:** I took feedback and changed the way I prepared. Instead of, like, only memorizing the definitions, I started practicing the answers using examples from Q&A projects. On explaining the reason behind my decision, I also started keeping my answers more structured and focused. Um, the, uh, experience definitely taught me that knowing technical information is important, but also being able to communicate and apply that knowledge is clearly, is just as important.

[07:43 PM ET] **AI Interviewer:** Okay. Tell me about a time when you had to navigate uncertainty while keeping others informed.

[07:44 PM ET] **You:** During my urban scooter Q&A project, there was times where I wasn't completely sure whether a, uh, unexpected behavior was actually a bug or whether I misread a requirement instead of immediately assuming it was a, a defect. Uh, I had to go back to requirements to compare them with the actual behavior. While I was definitely investigating, I made sure my documents was clearly showed what I had tested, uh, the test data that I had used, and the, the expecting and actual result, uh, the way anyone reviewed my work could understand what I knew and what, uh, w- what was still needed, uh, clarification for it. Once I had enough information, I could definitely take it step by step, update my documents. Uh, that, that experience definitely taught me that, um, when there's uncertainty, it's, uh, better to communicate what you know, be clear about what you don't know yet, and continue investigating rather than making assumptions.

[07:44 PM ET] **AI Interviewer:** Got it. Have you ever disagreed with unclear direction from leadership? What did you do?

[07:45 PM ET] **You:** I haven't experienced this while with leadership in professional Q&A role yet, but I have received un- unclear instructions during my training. I review the requirements, ask questions instead of making assumptions. Uh, I explained my concerns respectfully. Once I understood what was expected, I moved forward with the task.

[07:45 PM ET] **AI Interviewer:** Thank you. Can you walk me through a specific moment during your training when the instructions were unclear, and what exactly you did to address it?

[07:45 PM ET] **You:** ...

[07:45 PM ET] **AI Interviewer:** Take your moment. Would you like me to repeat the question?

[07:46 PM ET] **You:** One specific moment, one, one specific moment was during my Q&A project. I needed to test a mobile application, but the instructor said I had to create a car- carrier through the API before I could log in. At first, I wasn't completely sure, uh, about the, uh, the step connecting to the mobile testing. Instead of guessing, I went through the project requirements and the document, IPI document. Uh, I identified the endpoint for creating the carrier. Uh, I was able to work through the request and able to use the c- thecarrier credentials logins to continue with the mobile application testing. Uh, that definitely taught me, uh, that when the structures aren't clear, I should first review the, what's available in the document and break the task into smaller steps. And if so, I can ask for clarification when I need it rather than making assumptions.

[07:46 PM ET] **AI Interviewer:** Okay. Describe a situation where you identified a gap and stepped in without being asked.

[07:46 PM ET] **You:** ...

[07:46 PM ET] **AI Interviewer:** Take your time. Would you like me to repeat the question?

[07:47 PM ET] **You:** No, no, thank you. Doing a Q&A project, I noticed we needed more than just positive test cases, so I added negatives and boundary tests without being asked. I tested them, tested those things like empty fields, unvalid inputs, and values around the limits. It helped me improve my test co- uh, coverage and taught me that, uh, take initiative when I notice something that could be tested more thoroughly.

[07:47 PM ET] **AI Interviewer:** Thank you. What was the outcome? Did those additional test cases uncover anything unexpected?

[07:47 PM ET] **You:** Uh, not every additional test, tests found, uh, was a bug, but they improved my test coverage and helped me look at the application more differently. Uh, definitely started testing what users were supposed to do and also what could have happened when they were entered an invalid or unexpected information.

[07:47 PM ET] **AI Interviewer:** Got it. Have you ever volunteered for a responsibility outside your formal role?

[07:48 PM ET] **You:** Um, during my CUNA training, I definitely noticed additional scenarios that weren't part of my original test cases. I took the initiative to test and document them instead, instead of ignoring them. Uh, I also taught me, I also taught- I also seen I should, to take ownership, and when I see something that could affect product, uh, quality.

[07:48 PM ET] **AI Interviewer:** Thank you. Can you tell me more about what those additional scenarios were and what you found when you tested them?

[07:49 PM ET] **You:** For one example, when I was testing the customer information form, beyond entering no more valid information, I tested additional, uh, scenarios, like leaving required field empties, uh, entering invalid information, and testing values around the minimum and maximum character limits. I also looked at how the application handles those inputs, whether it prevented invalid data from being submitted or whether the users, uh, could receive a clear, uh, error message. What I found was testing those scenarios gave me much a bigger picture of how theform behaved outside the normal behavior. Um, not every scenario result is in the book, but I wouldn't claim that they did. But it helped me definitely identify where it was valid, needed, uh, uh, more close... It needed to be more clo- It needed to be more close, uh, uh, uh, attention, and, uh, definitely made my overall test coverage stronger in a wa- in a way.

[07:49 PM ET] **AI Interviewer:** Okay, let's move on. Have you ever solved a problem that others had been unable to resolve?

[07:49 PM ET] **You:** ...

[07:49 PM ET] **AI Interviewer:** Take your time. Would you like me to repeat the question?

[07:50 PM ET] **You:** I haven't been in that situation, um, on a professional team yet. Uh, during my Q&A training, I saw problems that they, that, that there weren't answers, wasn't obvious in my, um, scooter project, or- Orban scooter project. I had to figure out how to create a carrier with APIs before I could test the mobile. Uh, I reviewed the doc- documentation, broke it into steps, solved the issue, and definitely continued testing. It showed me that I am... I could be persistent when troubleshooting.

[07:50 PM ET] **AI Interviewer:** Got it. Tell me about a process you improved. How did you identify the opportunity?

[07:50 PM ET] **You:** I improved how I created test cases. I noticed that focusing on the main function could cause me to miss edge cases, so I started re- reviewing the requirements first and organizing my tests into positive and negative, uh, boundary scenarios that made my testing more organized and improved my coverage.

[07:50 PM ET] **AI Interviewer:** Thank you. Can you walk me through a specific project where you applied that improved process, and what difference it made?

[07:51 PM ET] **You:** I used this process on a Orbitz scooter project. I reviewed the requirements first, then created positive and negative boundaries, test cases before testing. Uh, it made my testing more organized, helped me track what I have covered, and definitely reduced the chances of missing edge cases or repeating the same test cases.

[07:51 PM ET] **AI Interviewer:** Okay. Have you ever had to make an important decision under significant time pressure?

[07:52 PM ET] **You:** Yes, during my Ubin Scoot router, uh, project, I had a limited amount of time to complete the, uh, web, mobile, and, uh, API testing. I realized I couldn't give every area the same amount of attention, so I had to decide how to prioritize my work. I reviewed what was required for the project, focused on the high priority fir- first, um, where the problems would have the biggest impact on the user. I organized my test cases, completed the critical scenarios first, and I used the remaining time that I had for additional, like, negative test da- test cases. Uh, the experience definitely taught me that under time, under time pressure, I need to stay organized, prioritize based on the risk and what's important, and to make sure that the critical test cases gets completed first.

[07:52 PM ET] **AI Interviewer:** Got it. Let's move on to the final topic. Tell me about a period when you were managing multiple competing priorities.

[07:53 PM ET] **You:** During my Urban Scoop project, I was balancing web, mobile, and API testings at the time. I had to break the project into smaller tasks, prioritize the most important, and track the, track my progress. It helped me because staying organized is comp- is completely, complete each part without losing focus. Um, that definitely taught me how to pro- pro- uh, uh, uh, how should I say it? Uh, not to, uh, not to overlook the important tasks and when I have a lot of responsibilities.

[07:53 PM ET] **AI Interviewer:** Thank you. Can you tell me more about how you decided which area to tackle first, and whether you had to adjust your plan at any point?

[07:54 PM ET] **You:** Uh, decided what to take, tackle first by looking at the project requirements, um, p- the priorities. Uh, web application was the largest part of the assignment, um, so I focused on that first. I reviewed the requirements, created my test cases, and tested most important functions before moving on to the mobile and IPA, IPI testing. I did have to adjust to my plan when I realized the mobile testing depending on APIs, uh, because it needed to create a carrier account before I could log into the mobile account. So I had to temporarily switch to API work, create a new carrier, and then return to the mobile testing. Uh, that taught me that having a plan important, that important. I also need to be more flexible w- when one task depends on another.

[07:54 PM ET] **AI Interviewer:** Thank you very much. That brings us to the end of the interview. All of your responses will now be scored as part of your career programme assessment. Well done for completing it, and best of luck with the rest of your programme.
